

Business Problem Statement

A travel company offers a variety of holiday packages to customers through direct sales interactions and marketing campaigns. Despite extensive customer outreach efforts, only a portion of customers choose to purchase the offered travel packages.

The company aims to analyze customer demographics, travel preferences, income levels, and sales interaction details to gain a deeper understanding of customer purchase behavior. By identifying the factors associated with package purchases, the organization seeks to improve customer targeting, optimize marketing strategies, and enhance the effectiveness of its sales efforts.

Business Question

"How can a travel company analyze customer demographics, travel behavior, and sales interaction data to understand purchase patterns, identify high-converting customer segments, and improve marketing and sales strategies to increase travel package conversions?"

Deliverables

1. Data Preparation & Analysis (Python):

- a. Cleaned and transformed the dataset by handling missing values, correcting data types, treating inconsistencies, and preparing the data for analysis.
- b. Performed univariate, bivariate, and multivariate analysis to identify customer behavior patterns and conversion drivers.

2. Statistical Analysis:

- a. Conducted hypothesis testing using T-tests and Chi-Square tests to evaluate the significance of relationships between customer attributes and travel package purchases.

3. Visualization & Insights (Power BI):

- a. Developed interactive dashboards to analyze conversion performance, customer demographics, package preferences, and key business drivers influencing travel package purchases.

4. Business Insights & Recommendations:

- a. Generated actionable insights on customer segments, package performance, contact methods, and conversion trends to support strategic business decisions.

5. Project Documentation & Portfolio Showcase:

- a. Documented the complete analytical workflow, findings, dashboard screenshots, business recommendations, and project methodology for portfolio presentation.

6. GitHub Repository:

- a. Published the complete project on GitHub, including dataset, Python notebooks, Power BI dashboard files, project report, and detailed README documentation.
